Mock Library for Integration test.

This release contain only the database integration part of push notification message sending and main library(s) to call wrapped functionality.

Step 1: create 'push' database using `*database.sql*` *file*.

Step 2: change database connection settings on `**include/config.php**` configuration file.

```
define('DBHOST', 'localhost');
define('DBNAME', 'push');
 // database name
define('DBUSERNAME', 'root');
 // username
define('DBPASSWORD', ''); // password
```

Step 3: Copy `**class**` and `**include**` folder to your project.

Step 4: include "class/PushManager.php" to your project.

Follow `**example.php**` for more information.
